

VIBRATORY BIN DISCHARGE FEEDERS

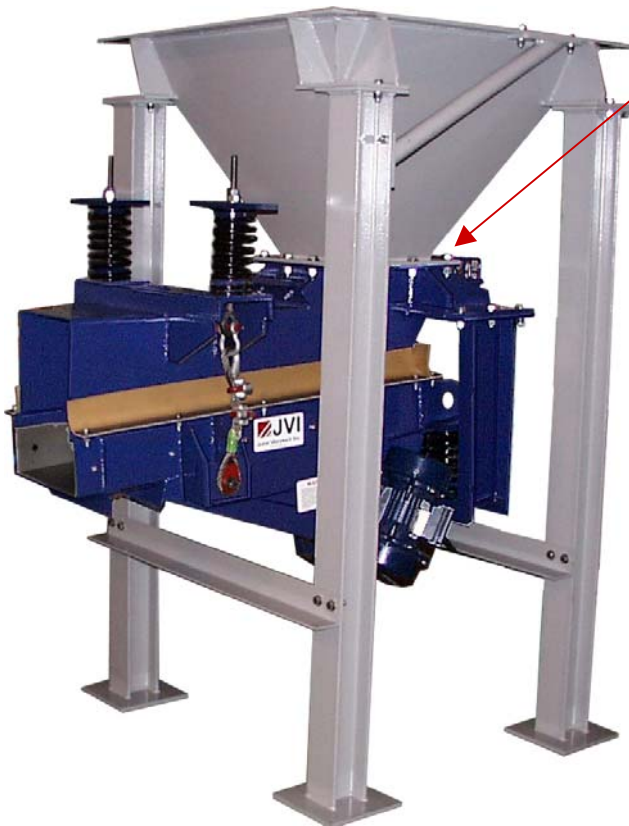

INNOVATIVE

RUGGED

RELIABLE

*with integrated chutework package

An innovative option available for hopper or bin discharge feeders is the integrated chutework package. This feeder includes the chutework and a unique support system in one piece of compact equipment, built to fit your application.

The feeder inlet simply bolts to the hopper outlet flange. Typical cumbersome cable supports are eliminated while engineering and installation costs are reduced. The support system is built into the framework of the feeder and provides safe and stable operation. The JVI bin discharge feeder eliminates the maintenance issues inherent with belt feeders and natural frequency vibratory feeders.

MODEL UPF ELECTROMECHANICAL

Benefits:

- ✓ Integrated package bolts right to the hopper outlet flange.
- ✓ Simple rugged design eliminates exciter springs and tuning problems.
- ✓ No suspension cables or base support needed.
- ✓ World-class JVI electromechanical drives.
- ✓ Excellent control packages available for accurate feed rates.
- ✓ Repeatable performance.
- ✓ Inherently low maintenance.
- ✓ Designs available for capacities up to 2500 TPH.
- ✓ Available in Electrochemical and Electromagnetic models.
