

The Ultimate Vibratory Coal Feeder by JVI

Engineered to order and ideal for stockpile reclaim, railcar unloading, and crusher feeding, JVI offers the ultimate electromechanical vibratory feeder. This machine eliminates the maintenance issues inherent with belt feeders and natural frequency vibratory feeders.

Based on JVI single mass technology, JVI vibratory feeders deliver high capacities, repeatable performance and trouble free service.

BENEFITS

- World-class electromechanical drives
- Eliminates exciter springs and tuning problems
- Designs available for capacities to 2500 TPH
- Low maintenance
- Repeatable performance
- Excellent control packages available
- Simple rugged design

The Integrated Chutework Package shown is ideal for coal bunker discharge:

- Feeder, Chutework and Supports all in one compact package
- Ensures proper feeding / chutework clearance
- Reduces engineering and installation costs
- Safe and stable design

MODEL UPF
Dual Drive, Single Mass,
Electromechanical Feeder
with Custom Integrated
Chutework Package

Exclusively from

*Available with or without JVI's innovative custom static chutework package and high quality control packages.
