

DIVERSI-TECH

APPLICATION STUDY

WELDING FUMES

THE PROBLEM

A technical school, located in Shawinigan, Québec, wanted to protect their students from breathing in welding fumes as well as reduce their heat loss in the winter with a system that would filter the welding fumes at source and return clean air back to the shop floor.

THE SOLUTION

Diversi-Tech shipped a FRED-JR unit under our “**Try Before You Buy**” program to the school for a test. The school compared the FRED-JR with another make of machine they were considering. To assist them in their decision a quote and **Product Comparison Data** was sent to the school to help them make their choice.

THE RESULTS

Following the Demo, and careful review of the comparison data, the technical school ordered 19 FRED-JR's from the BOC branch in Trois Rivières, Québec.

ALL DIVERSI-TECH MODELS ARE AVAILABLE FOR DEMO TESTING
